Physics of Metals and Metallography, Volume 51, 1981

SUBJECT INDEX

Bold figures indicate the issue

Adsorption of *d*-metals in diluted molybdenum-based alloys. Grain boundary – **3,** 113
Ageing kinetics of the solid solution Al–0·2 at.% Zn in the temperature range $(0{\cdot}2–0{\cdot}5)T_m$. Deformation and – **5,** 118
– of alloys Cu–Be, Ni–Be. On the nature of the surface relief resulting from eutectoid decomposition of alloys Cu–Be and – **4,** 185
– of AlZn alloys with a high zinc content. Influence of magnesium additions on the phase sequence during – **1,** 116
– of deformed austenitic alloy 13Kh18N10G3S2M2. Kinetic peculiarities of the – **5,** 71
Alloy, aluminium–silver, on the peculiarities of the formation of a metastable γ' phase in an – **5,** 98
– AMg6, mechanisms of superplastic deformation of aluminium – **3,** 142
– , binary, dynamics of mass transport in a dendritic cell during solidification of a – **1,** 130
– copper–aluminium–manganese. Reversible change of shape in – **2,** 174
– , crystalline, $Fe_{45}Ni_{45}P_{8{\cdot}5}B_{1{\cdot}5}$, PES study of the transition from the amorphous state to – **5,** 189
– Cu–Zn–Au under γ irradiation. Influence of gold on the variation of the disordering point of – **1,** 187
– Fe–23% Cr–15% Co–5% Mo. Magnetic properties and structure of single crystals of – **4,** 50
– Fe–31% Ni, the fine structure of the e.m.f. arising on explosive formation of martensite in – **1,** 182
– $Fe(Pt_{0{\cdot}46}Pd_{0{\cdot}52}Fe_{0{\cdot}02})_3$ with random exchange links of different signs. On the magnetic structure of – **5,** 56
– 13Kh18N10G3S2M2, kinetic peculiarities of the ageing of deformed austenitic – **5,** 71
– , Ni–Re–Mo, from the diffuse X-ray scattering. Application of the regularization method for determining the partial short-range order parameters of a ternary – **3,** 1
– 79NM in square pulse and sinusoidal excitation fields. Magnetic noise of specimens of – **6,** 78
– $Sm(Co_{0{\cdot}80}Cu_{0{\cdot}15}Fe_{0{\cdot}05})_7$. On the problem of the reversible changes in the structural state and coercive force of – **2,** 39
– $Sm(Co_{0{\cdot}9}Cu_{0{\cdot}1})_8$, X-ray diffraction analysis of structure transformations in – **3,** 188
– with a free surface in the self-consistent field approximation. Theory of atomic distribution in a binary – **3,** 23
– Zn–22% Al, formation of new grains during superplastic deformation of – **4,** 164

– Zn–22% Al in torsion. Creep of superplastic – 1, 72
Alloying elements in chromium nickel steels during friction *in vacuo*. Uphill diffusion of – 4, 109
Alloys, AlZn, with a high zinc content. Influence of magnesium additions on the phase sequence during ageing of – 1, 116
– based on titanium nickelide. Premartensite structural states in – 5, 200
–, binary metallic, with sodium. Work function of – 3, 180
–, Co–Al, as a manifestation of polytypism. The formation of new multilayer martensite phases in – 2, 74
–, cobalt, with samarium and heavy rare-earth metals. Temperature coefficients of induction of – 6, 179
– Cu–15·0–19·0 at.% Sn after quenching and definition of the α' phase structure. Structural states of – 4, 131
–, Cu–Ni–Al–Mn, at the stage when the coherent phase Ni_3Al is precipitated. Dispersion hardening of single crystals of – 4, 155
–, energy of helium solution in metals and – 6, 166
– Fe–Ni–V–C and Fe–Ni–Mn–V–C. Influence of austenite ageing with precipitation of dispersed VC carbides on the peculiarities of athermal and isothermal martensitic transformation in – 4, 74
– iron–aluminium, internal friction study of the mechanism of short-range ordering in low-concentration – 6, 89
–, iron–chromium–nickel, at low temperatures and the effect of a steady magnetic field. Temperature anomaly of the yield point of – 6, 135
–, iron–manganese, distribution of hyperfine fields in – 5, 45
–, iron–manganese, Mössbauer investigation of the h.c.p. phase of – 4, 179
–, iron–nickel–carbon, dilatation investigation of the $\alpha \rightarrow \gamma$ transformation and inheritance of the strengthening induced by plastic deformation during polymorphous transformations in – 6, 111
–, iron–nickel–manganese, with dual martenstic transformation kinetics. Magnetostriction of the austenite of – 3, 191
–, iron–nickel, structure features and kinetics of the polymorphic $\gamma \rightarrow \alpha$ transformation in – 4, 137
–, iron–palladium, and allowance for electron localization in the invar effect. Photoelectron spectroscopy of – 6, 168
–, lead–cadmium, of eutectic composition. Low-temperature plasticity of directionally crystallized – 2, 144
–, magnesium, with erbium and gadolinium. Investigation of short-range order in – 4, 98
–, manganese-based, influence of nickel and iron on the structure of martensite in – 4, 116
–, manganese–copper, premartensite instability in – 5, 160
–, manganese–nickel, structure of rapidly crystallized – 5, 181
–, Mn–Al, magnetic properties and crystal structure of – (review) 6, 1
–, MnCuGe, fine crystal structure of – 4, 93
–, molybdenum-based, grain boundary adsorption of *d*-metals in diluted – 3, 113
–, monocrystalline manganese-bsaed, and the shape-memory effect. Investigation of the deformation of – 4, 147
–, multicomponent, on short-range order in – 6, 36

– , Nb–Ti, after helium injection and heat treatment. Microstructure and superconductive properties of – 2, 68
– , Ni_3Mn, doped with copper. Magnetostriction of superstructured – 6, 177
– of iron with copper, cobalt, ruthenium and platinum. $\gamma \rightarrow \alpha$ phase transformation in binary – 2, 116
– of molybdenum with carbon. Influence of small addition of osmium and iridium on the decomposition of the solid solution in – 1, 103
– of Zr with Mo, Al, Nb, V and Ta. Structure transformations during decomposition of the β solid solution in – 2, 88
– , on diffusion in amorphous – 3, 93
– , ordered, with $L1_2$ structure. Free transformations of superdislocations and temperature peculiarities of the plastic behaviour of – 4, 170
– , palladium, with silver on exposure to hydrogen. Changes in the mechanical properties of – 2, 159
– Pd–1 at.% Er, Pd–1 at.% Dy. Diffusion, permeability and solubility of hydrogen in – 2, 106
– , $SmCo_5$-based, for permanent magnets. Anomalous diffraction effects on the patterns of – 2, 57
– , step aged, on the structure and strength–plasticity interrelation of – 5, 129
– , thermal diffusion in interstitial – 3, 7
– , two-phase, work hardening and dispersed fracture dynamics of – 6, 142
– $V_3Si_{1-x}Co_x$, nuclear magnetic resonance in – 3, 56
– with $L1_2$ structure. Different types of superdislocations dissociation in ordered – 2, 167
Aluminium alloy AMg6. Mechanisms of superplastic deformation of – 3, 142
– foils, growth of crystal whiskers on the surface of thin – 1, 89
– , influence of pressure on the solubility of iron ($FeAl_6$, $FeAl_3$) in – 6, 162
– , on the segregation of vacancies and iron atoms near dislocations in – 2, 83
– pig irons, investigation of the electronic structure of spheroidal graphite in – 4, 193
Analysis of defect structures and accomodation mechanisms during superplastic flow of polycrystals 3, 171
– of structure transformations in alloy $Sm(Co_{0.9}Cu_{0.1})_8$. X-ray diffraction – 3, 188
Anisotropy and the influence of a magnetic field on segregation of a ferromagnetic phase in the surface layer of non-magnetic compounds. Induced magneto-chemical – 3, 183
– , influence of, an X-ray scattering by highly distorted ageing solid solutions 5, 1
– , magnetic, constants of gadolinium on the magnetocalorific effect near the Curie point. Influence of the field dependence of the – 4, 196
– , magnetic, of the rare-earth sublattice of quasibinary compounds of the $R(A_{1-x}B_x)_2$, $R(A_{1-x}B_x)_3$, and $R_2(A_{1-x}B_x)_7$ types 3, 66
– , random, thermodynamic properties of a "gas" of superparamagnetic clusters in an amorphous ferromagnet with – 5, 169
– , resistivity, and deviation from the Matthiessen standard in single crystals of beryllium with impurity copper 4, 68
Anomalies, microhardness, of rhenium 3, 150
Anomaly, temperature, of the yield point of iron–chromium–nickel alloys at low temperatures and the effect of a steady magnetic field 6, 135
Antiferromagnetic planar defects on the hysteresis properties of uniaxial ferromagnets. Influence of – 2, 189

Atom, impurity, in a polycrystalline solid solution. On the magnetic state of an – **6,** 160
– , impurity, influence of anharmonic interaction on static displacements of ions round an – **2,** 22
Atomic distribution in a binary alloy with a free surface in the self-consistent field approximation. Theory of – **3,** 23
– interaction and energy of vacancy formation in intermetallic compounds LiAl, LiIn and NaTl **5,** 22
Atoms, impurity, round dislocations in block boundaries, determined by the method of internal friction. On the distribution of – **2,** 191
– , iron, near dislocations in aluminium. On the segregation of vacancies and – **2,** 83
– , interstitial, passing through different types of interstitial site with any degree of occupation. Theory of diffusion of – **1,** 9
– in VA metals and α iron. Strain-induced interaction of substitutional and interstitial – **3,** 136
Austenite ageing with precipitation of dispersed VC carbides on the peculiarities of athermal and isothermal martensitic transformation in alloys Fe–Ni–V–C and Fe–Ni–Mn–V–C. Influence of – **4,** 74
– of iron–nickel–manganese alloys with dual martensitic transformation kinetics. Magnetostriction of the – **3,** 191
– on the structure of the martensite inheriting them. Influence of the size of particles precipitated from the – **5,** 183
Austenitic alloy 13Kh18N10G3S2M2. Kinetic peculiarities of the ageing of deformed – **5,** 71
– nickel and manganese steels strengthened by vanadium carbide. Structure and mechanical properties of – **6,** 120

Beryllium, polycrystalline, influence of plastic deformation on the magnetic properties of – **2,** 182
– with impurity copper. Resistivity anisotropy and deviation from the Matthiessen standard in single crystals of – **4,** 68
Bicrystals, zinc, with a symmetrical tilt boundary. Investigation of grain boundary sliding in – **1,** 166
Bismuth crystals, kinetic study of the formation of wedge-shaped twins in – **5,** 143
Bloch wall in magnetic films. Analytical representation of an asymmetrical – **3,** 33
Bloch walls in thin and thick magnetic films. Structure and energy of two-dimensional – **6,** 42
Boundary sliding, influence of misorientations of neighbouring grains on – **5,** 163

Calculation, computer, of the energy barriers to the migration of a vacancy along the core of an edge dislocation in the f.c.c. lattice of copper **2,** 102
– of the density of states. On – **2,** 178
– of the relaxation volume of point defects. Microscopic model – **3,** 12
Carbide phase in a low-alloy niobium-containing heat resistant steel. Determination of the optimum concentration of – **1,** 77
– , vanadium, structure and mechanical properties of austenitic nickel and manganese steels strengthened by – **6,** 120
Carbides, VC, on the peculiarities of athermal and isothermal martensitic transformation in alloys Fe–Ni–V–C and Fe–Ni–Mn–V–C. Influence of austenite ageing with precipitation of dispersed – **4,** 74

Carbon, influence of, on the structure and properties of Nimonics subjected to high-temperature thermomechanical treatments 2, 135
Cast steel 30KhGNM. A special case of structure inheritance in – 3, 105
Cell, dendritic, during solidification of a binary alloy. Dynamics of mass transport in a – 1, 130
Cementite decomposition during plastic deformation of steel. Mechanism of – 1, 125
Cerium, influence of rare-earth impurities on the electronic transformation in – 4, 57
– metal, on the tricritical point of isomorphous transition in – 5, 174
– , on the $\alpha \rightarrow \beta$ transformation mechanism in – 5, 186
– under pressures up to 85 kbar. Phase diagram of – 1, 110
Changes in the mechanical properties of palladium and its alloys with silver on exposure to hydrogen 2, 159
– , structural, which accompany the plastic deformation of lead single crystals 6, 130
– , substructural, during the plastic deformation of titanium. Strengthening effects and – 5, 178
Cobalt alloys with samarium and heavy rare-earth metals. Temperature coefficients of induction of – 6, 179
– , positron annihilation investigation of the polymorphic transformation in – 2, 97
Composition, eutectic, low-temperature plasticity of directionally crystallized lead–cadmium alloys of – 2, 144
Compositions, influence of magnetic prehistory on the domain structure of amorphous Gd–Co films of different – 3, 185
Compound $Dy_{0.7}Tb_{0.3}Fe_2$, concerning the influence of elastic stresses on the magnetic properties of – 5, 68
Compounds LiAl, LiIn and NaTl, atomic interaction and energy of vacancy formation in intermetallic – 5, 22
– , non-magnetic, induced magneto-chemical anisotropy and the influence of a magnetic field on segregation of a ferromagnetic phase in the surface layer of – 3, 183
– of the $R(A_{1-x}B_x)_2$, $R(A_{1-x}B_x)_3$, and $R_2(A_{1-x}B_x)_7$ types. Magnetic anisotropy of the rare-earth sublattice of quasibinary – 3, 66
Conduction electrons by magnetic impurities with arbitrary spin in a quantizing magnetic field in the one-electron approximation. The scattering of – 1, 21
Conductivity, electrical, of thin metal wires. On the – 1, 194
Copper, computer calculation of the energy barriers to the migration of a vacancy along the core of an edge dislocation in the f.c.c. lattice of – 2, 102
– , magnetostriction of superconstructed Ni_3Mn alloys doped with – 6, 177
– , resistivity anisotropy and deviation from the Matthiessen standard in single crystals of beryllium with impurity – 4, 68
– , solid solutions of, in the polycrystalline state. Stages in the development of the plastic deformation of f.c.c. – 1, 184
Correlation, a theory of atomic ordering based on series expansion of the entropy over – 4, 21
Correlations, electron-hole, in soft X-ray emission spectra of metals. The coupled state 1, 34
Cottrell atmospheres of the system niobium–oxygen. Ordering of oxygen in the – 5, 172
Creep by dislocation climb. Influence of neutron irradiation on – 2, 149
– of superplastic alloy Zn–22% Al in torsion 1, 172
Crystal, fine, structure of MnCuGe alloys 4, 93

– , $KMnF_3$, on the interaction of structure and magnetic phase transitions in a – 3, 39
– structure in $ErFe_2$ and $DyFe_2$. Magentostriction distortions of the – 5, 64
– structure of Mn–Al alloys. Magnetic properties and – (review) 6, 1
– whiskers on the surface of thin aluminium foils, growth of – 1, 89
Crystallization of metallic glass $Ni_{60}Nb_{40}$, Study of the – 6, 85
Crystals, heterogeneous, continuous theory of interfaces in – 5, 28
– , metallic, influence of fluctuations and non-equilibrium faceting on the melting of very small – 6, 97
– nucleated during exposure to a pulsating magnetic field. Electron microscopic investigation of the structure of martensite – 4, 84
Curie point, influence of the field dependence of the magnetic anisotropy constants of gadolinium on the magnetocalorific effect near the – 4. 196
Current, determination of the mechanical stresses induced by – 1, 191

Decomposition of the solid solution in alloys of molybdenum with carbon. Influence of small additions of osmium and iridium on the – 1, 103
– of the β solid solution in alloys of Zr with Mo, Al, Nb, V and Ta. Structure transformations during – 2, 88
– of the supersaturated solid solution of $Sm(Co_{0\cdot65}Cu_{0\cdot35})_{5\cdot6}$. Coercive force and – 6, 172
Defect structures and accomodation mechanisms during superplastic flow of polycrystals. Analysis of – 3, 171
Defects, influence of antiferromagnetic planar, on the hysteresis properties of uniaxial ferromagnets 2, 189
Deformation and ageing kinetics of the solid solution Al–0·2 at.% Zn in the temperature range $(0\cdot2\text{–}0\cdot5)T_m$ 5, 118
– , low-temperature plastic, and susceptibility of steels Kh18N(20–25) 2, 50
– of aluminium alloy AMg6. Mechanisms of superplastic – 3, 142
– of monocrystalline manganese-based alloys and the shape-memory effect. Investigation of the – 4, 147
– , plastic, of titanium. Strengthening effects and substructural changes during the – 5, 178
– , plastic, on the magnetic properties of polycrystalline beryllium. Influence of – 2, 182
– , superelastic, due to a series of martensitic transitions 3, 131
– , superplastic, of alloy Zn–22% Al. Formation of new grains during – 4, 164
Deformed single crystals of a heat-resistant austenitic steel. Features of texture formation and stress relaxation in – 1, 155
– titanium, L_x spectra of – 1, 189
Dependence of the electroplastic effect in zinc of individual pulse lengths 5, 134
Dependencies, temperature, on the susceptibility and magnetization of solid solutions of the system $Gd_xPr_{1-x}Zn$ 3, 88
Diffuse X-ray scattering. Application of the regularization method for determining the partial short-range order parameters of a ternary Ni–Re–Mo alloy from the – 3, 1
– X-ray scattering in neutron irradiated nickel 4, 104
Diffusion characteristics of the grain boundaries of eutectic alloys with an oriented structure 1, 84
– in amorphous alloys. On – 3, 93
– , mutual, in the system iron–vanadium. Investigation of – 5, 154

– of interstitial atoms passing through different types of interstitial site with any degree of occupation. Theory of – 1, 9
– of interstitial impurities in metals. Influence of structure defects on the – 6, 149
–, permeability and solubility of hydrogen in alloys Pd–1 at.% Er, Pd–1 at.% Dy 2, 106
–, thermal, in interstitial alloys 3, 7
–, uphill, of alloying elements in chromium nickel steels during friction *in vacuo* 4, 109
Dilatation investigation of the $\alpha \rightarrow \gamma$ transformation and inheritance of the strengthening induced by plastic deformation during polymorphous transformations in iron–nickel–carbon alloys 6, 111
Dislocation climb, influence of neutron irradiation on creep by – 2, 149
–, edge, in the f.c.c lattice of copper. Computer calculation of the energy barriers to the migration of a vacancy along the core of an – 2, 102
– walls with charged point defects in metals. Electrostatic interaction of – 5, 197
Dislocations in aluminium, on the segregation of vacancies and iron atoms near – 2, 83
– in the process of slip. The relation between the processes involved in the circumvention and intersection of strengthening particles by a series of – 3, 155
Dispersion hardening of single crystals of Cu–Ni–Al–Mn alloys at the stage when the coherent phase Ni_3Al is precipitated 4, 155
Displacements of ions round an impurity atom. Influence of anharmonic interaction on static – 2, 22
Distortions, dynamical, of a cylindrical magnetic domain in a uniform magnetic field 6, 65
Distribution of hyperfine fields in iron–manganese alloys 5, 45
– of impurity atoms round dislocations in block boundaries, determined by the method of internal friction. On the – 2, 191
– of misorientations in a pseudopolycrystalline aggregate 5, 92
– of spontaneous magnetization in a silicon iron crystal. Influence of a state of planar strain on the – 2, 28
Domain structure and magnetic reversal in Sm–Co–Fe–Cu–Zr magnets 3, 77
– structure of amorphous Gd–Co films of different compositions. Influences of magnetic prehistory on the – 3, 185
– structure of heterogeneous amorphous films of GdCo. Magnetic properties and – 1, 66
– structure resulting from rapid cooling, on the magnetic properties of silicon iron. Influence of destabilization of the – 5, 150
Dynamics of mass transport in a dendritic cell during solidification of a binary alloy 1, 130
Dysprosium and terbium, electron band structure of – 5, 40

Effect, electroplastic, in zinc of individual pulse lengths. Dependence of the – 5, 134
–, invar, photoelectron spectroscopy of iron–palladium alloys and allowance for electron localization in the – 6, 168
–, magnetocalorific, near the Curie point. Influence of the field dependence of the magnetic anisotropy constants of gadolinium on the – 4, 196
–, many-pulse, in the single-pulse echo method. Analog of the – 4, 6
– of a study magnetic field. Temperature anomaly of the yield point of iron–chromium–nickel alloys at low temperatures and the – 6, 135
Effects, anomalous diffraction, on the patterns of $SmCo_5$-based alloys for permanent magnets 2, 57

– , strengthening, and substructural changes during the elastic deformation of titanium 5, 178
Electrical and mechanical properties of palladium. Influence of hydrogen phase hardening on the – 5, 107
– insulation coatings in a sheet of anisotropic transformer steel. Determination of the stresses generated by – 6, 157
Electromagnetic waves in the metallic films in a magnetic field 4, 1
Electron band structure of gadolinium 4, 33
– band structure of terbium and dysprosium 5, 40
– energy and peculiarities of ordered systems with long periods. I. Rearrangement of the electron spectrum on formation of long period lattices and changes of electron energy 2, 1
– -hole correlations in soft X-ray emission spectra of metals. The coupled state 1, 34
– localization in the invar effect. Photoelectron spectroscopy of iron–palladium alloys and allowance for – 6, 168
– microscopic investigation of the structure of martensite crystals nucleated during exposure to a pulsating magnetic field 4, 84
– spectra of rare metals. The structural peculiarities of the high-pressure – 1, 61
– spectrum on formation of long period lattices and changes of electron energy. Rearrangement of the – . Electron energy and peculiarities of ordered systems with long periods, I. 2, 1
Electronic structure of non-stoichiometric hydrides of nickel and palladium 3, 16
– structure of spheroidal graphite in aluminium pig irons. Investigation of the – 4, 193
– structure of yttrium gallides. X-ray sepctranalysis of the – 5, 52
– transformation in cerium. Influence of rare-earth impurities on the – 4, 57
Electrons in the infrared range. Concerning the cyclotron resonance on sliding – 3, 48
Electroplastic effect in zinc on individual pulse lengths. Dependence of the – 5, 134
E.m.f. arising on explosive formation of martensite in alloy Fe–31% Ni. The fine structure of the – 1, 182
Energy and structure of two-dimensional Bloch walls in thin and thick magnetic films 6, 42
– barriers to the migration of a vacancy along the core of an edge dislocation in the f.c.c. lattice of copper. Computer calculation of the – 2, 102
– , electron, and peculiarities of ordered systems with long periods. I. Rearrangement of the electron spectrum on formation of long period lattices and changes of electron energy 2, 1
– of helium solution in metals and alloys 6, 166
– of 3*d* metals. Model pseudopotential of transition metals. Total binding – 6, 49
Eutectic alloys with an oriented structure. Diffusion characteristics of the grain boundaries of – 1, 84
– composition, low-temperature plasticity of directionally crystallized lead–cadmium alloys of – 2, 144
Eutectoid decomposition of alloys Cu–Be and ageing of alloys Cu–Be, Ni–Be. On the nature of the surface relief resulting from – 4, 185

F.c.c. lattice of copper. Computer calculation of the energy barriers to the migration of a vacancy along the core of an edge dislocation in the – 2, 102

– solid solutions of copper in the polycrystalline state. Stages in the development of the plastic deformation of – 1, 184
Features of texture formation and stress relaxation in deformed single crystals of a heat-resistant austenitic steel 1, 155
Fermi surface topology. Microscopic theory of the dependence of the properties of simple metals on changes in the – 1, 1
Ferromagnet, amorphous, with random anisotropy. Thermodynamic properties of a "gas" of superparamagnetic clusters in an – 5, 169
Ferromagnetic metals and semiconductors. Spin relaxation processes in – . IV. Cross relaxation 2, 14
– phase in the surface layer of non-magnetic compounds. Induced magneto-chemical anisotropy and the influence of a magnetic field on segregation of a – 3, 183
Ferromagnets, uniaxial, influence of antiferromagnetic planar defects on the hysteresis properties of – 2, 189
– with cylindrical magnetic domains. Parametric sound amplification by a pulsating magnetic field in – 5, 36
Field approximation, theory of atomic distribution in a binary alloy with a free surface in the self-consistent – 3, 23
Fields, excitation, magnetic noise of specimens of alloy 79NM in square pulse and sinusoidal – 6, 78
Films, Gd–Co, of different compositions. Influence of magnetic prehistory on the domain structure of amorphous – 3, 185
– , magnetic, analytical representation of an asymmetrical Bloch wall in – 3, 33
– , MnBi, microstructure of magnetic holograms on – 2, 42
– of GdCo, magnetic properties and domain structure of heterogeneous amorphous – 1, 66
– , peculiarities of the reverse $\alpha \rightarrow \gamma$ transformation in iron–nickel invar – 6, 153
– , structure and energy of two-dimensional Bloch walls in thin and thick magnetic – 6, 42
– , thin metallic, in a magnetic field. Electromagnetic waves in – 4, 1
Flow of polycrystals. Analysis of defect structures and accomodation mechanisms during superplastic – 3, 171
Fluctuations and non-equilibrium faceting on the melting of very small metallic crystals. Influence of – 6, 97
Fracture dynamics of two-phase alloys. Work hardening and dispersed – 6, 142

Gadolinium, electron band structure of – 4, 33
– on the magnetocalorific effect near the Curie point. Influence of the field dependence of the magnetic anisotropy constants of – 4, 196
Gold, influence of, on the variation of the disordering point of alloy Cu–Zn–Au under γ irradiation 1, 187
Grain boundaries of eutectic alloys with an oriented structure. Diffusion characteristics of the – 1, 84
– boundary adsorption of *d*-metals in diluted molybdenum-based alloys 3, 113
– boundary sliding in zinc bicrystals with a symmetrical tilt boundary. Investigation of – 1, 166
Grains, neighbouring, on boundary sliding. Influence of misorientations of – 5, 163

Graphite in aluminium pig iron. Investigation of the electronic structure of spheroidal – 4, 193

Hardening, secondary, of molybdenum and vanadium steels 1, 148
H.c.p. phase of iron–manganese alloys. Mössbauer investigation of the – 4, 179
Heat-treated engineering steels in weak and medium magnetic fields. On the possible reasons for differences in the magnetic reversal processes of – 4, 61
– treatment, microstructure and superconductive properties of Nb–Ti alloys after helium injection and – 2, 68
– treatment, peculiarities of the strengthening and the structure of bearing steel during hydroextrusion and subsequent – 4, 189
– treatment programs in relation to the phase and structure state of steel 30KhGVT. Optimization of – 2, 109
Heating, rapid, softening of cold deformed tungsten during – 5, 111
Helium injection and heat treatment. Microstructure and superconductive properties of Nb–Ti alloys after – 2, 68
– solution in metals and alloys. Energy of – 6, 166
Hydrogen, changes in the mechanical properties of palladium and its alloys with silver on exposure to – 2, 159
– in alloys Pd–1 at.% Er, Pd–1 at.% Dy. Diffusion, permeability and solubility of – 2, 106
– phase hardening on the electrical and mechanical properties of palladium. Influence of – 5, 107
–, statistical analysis of the structure geometry of the dynamic molecular model of amorphous and liquid – 1, 50
Hydrostatic pressure. On the theory of first-order magnetic phase transitions under – . I. Phase equilibrium in order–order transitions 3, 81
Hysteresis properties of uniaxial ferromagnets. Influence of antiferromagnetic planar defects on the – 2, 189

Impurities, homovalent, on the residual resistivity of metals. Influence of – 4, 41
– , influence of rare-earth, on the electronic transformation in cerium 4, 57
– in metals, influence of structure defects on the diffusion of interstitial – 6, 149
Impurity atom in a polycrystalline solid solution. On the magnetic state of an – 6, 160
– atoms round dislocations in block boundaries, determined by the method of internal friction. On the distribution of – 2, 191
Influence of anharmonic interaction on static displacements of ions round an impurity atom 2, 22
– of anisotropy on X-ray scattering by highly distorted ageing solid solutions 5, 1
– of antiferromagnetic planar defects on the hysteresis properties of uniaxial ferromagnets 2, 189
– of a state of planar strain on the distribution of spontaneous magnetization in a silicon iron crystal 2, 28
– of austenite ageing with precipitation of dispersed VC carbides on the peculiarities of athermal and isothermal martensitic transformation in alloys Fe–Ni–V–C and Fe–Ni–Mn–V–C 4, 74
– of carbon on the structure and properties of Nimonics subjected to high-temperature thermomechanical treatment 2, 135

– of destabilization of the domain structure resulting from rapid cooling, on the magnetic properties of silicon iron 5, 150
– of elastic stresses on the magnetic properties of compound $Dy_{0.7}Tb_{0.3}Fe_2$. Concerning the – 5, 68
– of fluctuations and non-equilibrium faceting on the melting of very small metallic crystals 6, 97
– of gold on the variation of the disordering point of alloy Cu–Zn–Au under γ irradiation 1, 187
– of homovalent impurities on the residual resistivity of metals 4, 41
– of hydrogen phase hardening on the electrical and mechanical properties of palladium 5, 107
– of magnesium additions on the phase sequence during ageing of AlZn alloys with a high zinc content 1, 116
– of magnetic prehistory on the domain structure of amorphous Gd–Co films of different compositions 3, 185
– of misorientations of neighbouring grains on boundary sliding 5, 163
– of neutron irradiation on creep by dislocation climb 2, 149
– of nickel and iron on the structure of martensite in manganese-based alloys 4, 116
– of plastic deformation on the magnetic properties of polycrystalline beryllium 2, 182
– of pressure on the solubility of iron ($FeAl_6$, $FeAl_3$) in aluminium 6, 162
– of rare-earth impurities on the electronic transformation in cerium 4, 57
– of small additions of osmium and iridium on the decomposition of the solid solution in alloys of molybdenum with carbon 1, 103
– of structure defects on the diffusion of interstitial impurities in metals 6, 149
– of the field dependence of the magnetic anisotropy constants of gadolinium on the magnetocalorific effect near the Curie point 4, 196
– of the size of particles precipitated from the austenite on the structure of the martensite inheriting them 5, 183
– of titanium carbonitrides on the structure and properties of low-carbon steels 6, 104
Interaction, atomic, and energy of vacancy formation in intermetallic compounds LiAl, LiIn and NaTl 5, 22
– , electrostatic, of dislocation walls with charged point defects in metals 5, 197
– , influence of anharmonic, on static displacements of ions round an impurity atom 2, 22
– of structure and magnetic phase transitions in a $KMnF_3$ crystal. On the – 3, 39
– , strain-induced, of substitutional and interstitial atoms in VA metals and α iron 3, 136
Intermetallic TiNi and its variations during the martensitic transformation. The photoelectron spectrum of – 2, 33
Ions round an impurity atom. Influence of anharmonic interaction on static displacements of – 2, 22
Internal friction study of the mechanism of short-range ordering in low-concentration iron–aluminium alloys 6, 89
Invar effect, photoelectron spectroscopy of iron–palladium alloys and allowance for electron localization in the – 6, 168
Invars, alloyed iron–nickel. Young's modulus of – 5. 194
Investigation of grain boundary sliding in zinc bicrystals with a symmetrical tilt boundary 1, 166

– of mutual diffusion in the system iron–vanadium 5, 154
– of short-range order in magnesium alloys with erbium and gadolinium 4, 98
– of the deformation of monocrystalline manganese-based alloys and the shape-memory effect 4, 147
– of the electronic structure of spheroidal graphite in aluminium pig irons 4, 193
– of the recrystallization processes of palladium in a field-ion microscope 1, 142
– of the tempering processes of quenched steel 60S2 after high-temperature thermo-mechanical treatment 2, 184
– of ultrasoft X-ray spectra of iridium, platinum and gold 6, 73
–, positron annihilation, of the polymorphic transformation in cobalt 2, 97
Iridium, influence of small additions of osmium and – on the decomposition of the solid solution in alloys of molybdenum with carbon. 1, 103
Iron and nickel, influence of, on the structure of martensite in manganese-based alloys 4, 116
– atoms near dislocations in aluminium. On the segregation of vacancies and – 2, 83
– crystal, influence of a state of planar strain on the distribution of spontaneous magnetization in a silicon 2, 28
– crystals, quasistatic and dynamic magnetostriction curves of silicon – 1, 73
– ($FeAl_6$, $FeAl_3$) in aluminium. Influence of pressure on the solubility of – 6, 162
Iron–nickel invar films peculiarities of the reverse $\alpha \rightarrow \gamma$ transformation in – 6, 153
Irradiated nickel, diffuse X-ray scattering in neutron – 4, 104
Irradiation, γ, influence of gold on the variation of the disordering point of alloy Cu–Zn–Au under – 1, 187
–, neutron, on creep by dislocation climb. Influence of – 2, 149

Kinetic peculiarities of the ageing of deformed austenitic alloy 13Kh18N10G3S2M2 5, 71
– study of the formation of wedge-shaped twins in bismuth crystals 5, 143
Kinetics, structure features and, of the polymorphic $\gamma \rightarrow \alpha$ transformation in iron–nickel alloys 4, 137
–, transformation, magnetostriction of the austenite of iron–nickel–manganese alloys with dual martensitic – 3, 191

Lattices, long period, and changes of electron energy. Rearrangement of the electron spectrum on formation of –. I. Electron energy and peculiarities of ordered systems with long periods. 2, 1
Lead single crystals. Structural changes which accompany the plastic deformation of – 6, 130

Macroscopic equations of magnet dynamics. IV. *s–d* model far from equilibrium 1, 41
Magnesium additions, influence of, on the phase sequence during ageing of AlZn alloys with a high zinc content 1, 116
– alloys with erbium and gadolinium. Investigation of short-range order in – 4, 98
Magnet dynamics, macroscopic equations of –. IV. *s–d* model far from equilibrium 1, 41
Magnetic anisotropy of the rare-earth sublattice of quasibinary compounds of the $R(A_{1-x}B_x)_2$, $R(A_{1-x}B_x)_3$, and $R_2(A_{1-x}B_x)_7$ types 3, 66
– domain and their mutual transitions. Two types of cylindrical – 5, 166
– domain in a uniform magnetic field. Dynamical distortions of a cylindrical – 6, 65

– domain, parametric sound amplification by a pulsating magnetic field in ferromagnets with cylindrical – 5, 36
– field, dynamical distortions of a cylindrical magnetic domain in a uniform – 6, 65
– field, electromagnetic waves in thin metallic films in a – 4, 1
– field, electron microscopic investigation of the structure of martensite crystals nucleated during exposure to a pulsating – 4, 84
– field in ferromagnets with cylindrical magnetic domains. Parametric sound amplification by a pulsating – 5, 36
– field in the one-electron approximation. The scattering of conduction electrons by magnetic impurities with arbitrary spin in a quantizing – 1, 21
– field, morphological peculiarities of martensite formed under the influence of a – 1, 136
– field on segregation of a ferromagnetic phase in the surface layer of non-magnetic compounds. Induced magneto-chemical anisotropy and the influence of a – 3, 183
– field, temperature anomaly of the yield point of iron–chromium–nickel alloys at low temperatures and the effect of a steady – 6, 135
– fields, on the possible reasons for differences in the magnetic reversal processes of heat-treated engineering steels in weak and medium – 4, 61
– holograms on MnBi films. Microstructure of – 2, 42
– impurities with arbitrary spin in a quantizing magnetic field in the one-electron approximation. The scattering of conduction electrons by – 1, 21
– noise of specimens of alloy 79NM in square pulse and sinusoidal excitation fields 6, 78
– , nuclear, resonance in alloys $V_3Si_{1-x}Co_x$ 3, 56
– phase transitions in a $KMnF_3$ crystal. On the interaction of structure and – 3, 39
– phase transitions under hydrostatic pressure. On the theory of first-order – . I. Phase equilibrium in order–order transitions 3, 81
– prehistory on the domain structure of amorphous Gd–Co films of different compositions. Influence of – 3, 185
– properties and crystal structure of Mn–Al (review) 6, 1
– properties and domain structure of heterogeneous amorphous films of GdCo 1, 66
– properties and structure of single crystals of alloy Fe–23% Cr–15% Co–5% Mo 4, 50
– properties of compound $Dy_{0.7}Tb_{0.3}Fe_2$. Concerning the influence of elastic stresses on the – 5, 68

– and mechanical properties of austenitic nickel and manganese steels strengthened by vanadium carbide 6, 120

– and properties of low-carbon steels. Influence of titanium carbonitrides on the – 6, 104
– and properties of Nimonics subjected to high-temperature thermomechanical treatments. Influence of carbon on the – 2, 135
– and strength–plasticity interrelation of step aged alloys. On the – 5, 129
– defects on the diffusion of interstitial impurities in metals. Influence of – 6, 149
–, domain, and magnetic reversal in Sm–Co–Fe–Cu–Zr magnets 3, 77
–, electronic, of non-stoichiometric hydrides of nickel and palladium 3, 16
– features and kinetics of the polymorphic $\gamma \rightarrow \alpha$ transformation in iron–nickel alloys 4, 137
– geometry of the dynamic molecular model of amorphous and liquid hydrogen. Statistical analysis of the – 1, 50
– inheritance in cast steel 30KhGNM. A special case of – 3, 105
–, $L1_2$, different types of superdislocation dissociation in ordered alloys with – 2, 167
–, $L1_2$, free transformations of superdislocations and temperature peculiarities of the plastic behaviour of ordered alloys with – 4, 170
– of bearing steel during hydroextrusion and subsequent heat treatment. Peculiarities of the strengthening and the – 4, 189
– of martensite in manganese-based alloys. Influence of nickel and iron on the – 4, 116
– of martensite crystals nucleated during exposure in a pulsating magnetic field. Electron microscopic investigation of the – 4, 84
– of MnCuGe alloys, Fine crystal – 4, 93
– of terbium and dysprosium. Electron band – 5, 40
– of rapidly crystallized manganese–nickel alloys 5, 181
– of single crystals of alloy Fe–23% Cr–15% Co–5% Mo. Magnetic properties and – 4, 50
– of the martensite inheriting them. Influence of the size of particles precipitated from the austenite on the – 5, 183
– of yttrium gallides. X-ray spetranalysis of the electronic – 5, 52
– state of steel 30KhGVT. Optimization of heat treatment programs in relation to the phase and – 2, 109
– transformations in alloy Sm $(Co_{0.9}Cu_{0.1})_8$. X-ray diffraction analysis of – 3, 188
– transformations of the β solid solution in alloys of Zr with Mo, Al, Nb, V and Ta 2, 88
Structures, defect, and accomodation mechanisms during superplastic flow of polycrystals. Analysis of – 3, 171
Study of the crystallization of metallic glass $Ni_{60}Nb_{40}$ 6, 85
Sublattice of quasibinary compounds of the $R(A_{1-x}B_x)_2$, $R(A_{1-x}B_x)_3$, and $R_2(A_{1-x}B_x)_7$ types. Magnetic anisotropy of rare-earth – 3, 66
Superconductivity of niobium nitrides. Magnetic susceptibility and – 3, 72
Superdislocation dissociation in ordered alloys with $L1_2$ structure. Different types of – 2, 167
Superdislocations and temperature peculiarities of the plastic behaviour of ordered alloys with $L1_2$ structure. Free transformations of – 4, 170
Superelastic deformation due to a series of martensitic transitions 3, 131
Superplastic alloy Zn–22% Al in torsion. Creep of – 1, 172
– deformation of aluminium alloy AMg6. Mechanisms of – 3, 142
– flow of polycrystals. Analysis of defect structures and accomodation mechanisms during – 3, 171
Surface layer of non-magnetic compounds. Induced magneto-chemical anisotropy and

the influence of a magnetic field on segregation of a ferromagnetic phase in the – 3, 183
– of thin aluminium foils. Growth of crystal whiskers on the – 1, 89
– relief resulting from eutectoid decomposition of alloys Cu–Be and ageing of alloys Cu–Be, Ni–Be. On the nature of the – 4, 185
Susceptibility and magnetization of solid solutions of the system $Gd_xPr_{1-x}Zn$. Temperature dependencies of the – 3, 88
– , magnetic, and superconductivity of niobium nitrides 3, 72
– of steels Kh18N (20–25). Low-temperature plastic deformation and – 2, 50
System $Gd_xPr_{1-x}Zn$, temperature dependencies of the susceptibility and magnetization of solid solutions of the – 3, 88
– iron–vanadium. Investigation mutual diffusion in the – 5, 154
– niobium–oxygen, ordering of oxygen in the Cottrell atmospheres of the – 5, 172
– scandium–heavy rare-earth. Some regularities in the variations of magnetic properties in the – 6, 56

Temperature anomaly of the yield point of iron–chromium–nickel alloys at low temperatures and the effect of a study magnetic field 6, 135
– coefficients of induction of cobalt alloys with samarium and heavy rare-earth metals 6, 179
– dependencies of the susceptibility and magnetization of solid solutions of the system $Gd_xPr_{1-x}Zn$ 3, 88
– stability of the ω phase of zirconium 5, 157
Tempering processes of quenched steel 60S2 after high-temperature thermomechanical treatment. Investigation of the – 2, 184
Terbium and dysprosium, electron band structure of – 5, 40
Texture formation and stress relaxation in deformed single crystals of a heat-resistant austenitic steel. Features of – 1, 156
Theory, a, of atomic ordering based on series expansion of the entropy over correlation 4, 21
– , microscopic, of the dependence of the properties of simple metals on changes in the Fermi surface topology 1, 1
– of atomic distribution in a binary alloy with a free surface in the self-consistent field approximation 3, 23
– of diffusion of interstitial atoms passing through different types of interstitial site with any degree of occupation 1, 9
– of electroreflection of metals. On the – 4, 10
– of interfaces in heterogeneous crystals. Comtinuous – 5, 28
– of melting of small metal particles. On the macroscopic – 3, 100
– of spatially periodic structures. The quasiparticle concept in the – 5, 13
– on the, of first-order magnetic phase transitions under hydrostatic pressure. I. Phase equilibrium in order–order transitions 3, 81
– , pseudopotential, on the classification of metals in terms of – 4, 28
Thermal diffusion in interstitial alloy 3, 7
Thermodynamic properties of a "gas" of supermagnetic clusters in an amorphous ferromagnet with random anisotropy 5, 169
Titanium carbonitrides, influence of, on the structure and properties of low-carbon steels 6, 104

– , L_α spectra of deformed – 1, 189
– , strengthening effects and structural changes during the plastic deformation of – 5, 178
– , structural and kinetic stages of the $\beta \rightarrow \alpha$ transformation in – 1, 96
Transformation, $\alpha \rightarrow \gamma$, and inheritance of the strengthening induced by plastic deformation during polymorphous transformations in iron–nickel–carbon alloys. Dilatation investigation of the – 6, 111
– , electronic, in cerium. Influence of rare-earth impurities on the – 4, 57
– in alloys Fe–Ni–V–C and Fe–Ni–Mn–V–C. Influence of austenite ageing with precipitation of dispersed VC carbides on the peculiarities of athermal and isothermal martensitic – 4, 74
– in binary alloys of iron with copper, ruthenium and platinum. $\gamma \rightarrow \alpha$ phase – 2, 116
– , $\gamma \rightarrow \alpha$, in iron–nickel alloys. Structures features and kinetics of the polymorphic – 4, 137
– , $\alpha \rightarrow \gamma$, in iron–nickel invar films. Peculiarities of the reverse – 6, 153
– , $\beta \rightarrow \alpha$, in titanium. Structural and kinetic stages of the – 1, 96
– kinetics, magnetostriction of the austenite of iron–nickel–manganese alloys with dual martensitic – 3, 191
– , $\alpha \rightarrow \beta$, mechanism in cerium. On the – 5, 186
– , polymorphic, in cobalt. Positron annihilation investigation of the – 2, 97
– , the photoelectron spectrum of intermetallic TiNi and its variations during the martensitic – 2, 33
Transformations, free, of superdislocations and temperature peculiarities of the plastic behaviour of ordered alloys with $L1_2$ structure 4, 170
– , polymorphous, in iron–nickel–carbon alloys. Dilatation investigation of the $\alpha \rightarrow \gamma$ transformation and inheritance of the strengthening induced by plastic deformation during – 6, 111
– , structure, during decomposition of the β solid solution in alloys of Zr with Mo, Al, Nb, V and Ta 2, 88
– , structure, in alloy Sm $(Co_{0\cdot9}Cu_{0\cdot1})_8$. X-ray diffraction analysis of – 3, 188
Transition from the amorphous state to crystalline alloy $Fe_{45}Ni_{45}P_{8\cdot5}B_{1\cdot5}$. PES study of the – 5, 189
– , isomorphous, in cerium metal. On the tricritical point of – 5, 174
– metals in alloys. X-ray emission spectral analysis of the nearest neighbourhood of – 2, 62
– metals, model pseudopotential of – . Total binding energy of 3*d* metals 6, 49
Transitions, magnetic phase, in a $KMnF_3$ crystal. On the interaction of structure and – 3, 39
– , martensitic, superelastic deformation due to a series of – 3, 131
– , mutual, two types of cylindrical magnetic domain and their – 5, 166
– under hydrostatic pressure. On the theory of first-order magnetic phase – . I. Phase equilibrium in order–order transitions 3, 81
Treatment, heat, microstructure and superconductive properties of Nb–Ti alloys after helium injection and – 2, 68
–, heat, programs in relation to the phase and structure state of steel 30KhGVT. Optimization of – 2, 109
– , high-temperature thermomechanical, investigation of the tempering processes of quenched steel 60S2 after – 2, 184

Treatments, high-temperature thermomechanical, influence of carbon on the structure and properties of Nimonics subjected to – **2,** 135
Tungsten, cold deformed, during rapid heating. Softening of – **5,** 111

Vacancies and iron atoms near dislocations in aluminium. On the segregation of – **2,** 83
Vacancy formation in intermetallic compounds LiAl, LiIn and NaTl. Atomic interaction and energy of – **5,** 22
Variations of magnetic properties in the system scandium–heavy rare-earth metal. Some regularities in the – **6,** 56

Waves, electromagnetic, in thin metallic films in a magnetic field **4,** 1
Work function of binary metallic alloys with sodium **3,** 180
– hardening and dispersed fracture dynamics of two-phase alloys **6,** 142
– hardening of single crystals of $Ni_3(Al, Cr)$ **1,** 162

X-ray diffraction analysis of structure transformations in alloy $Sm(Co_{0.9}Cu_{0.1})_8$ **3,** 188
– , diffuse, scattering in neutron irradiated nickel **4,** 104
– emission spectra of metals. Electron-hole correlations in soft – . The coupled state **1,** 34
– emission spectral analysis of the nearest neighbourhood of transition metals in alloys **2,** 62
– scattering, application of the regularization method for determining the partial short-range order parameters of a ternary Ni–Re–Mo alloy from the diffuse – **3,** 1
– spectranalysis of the electronic structure of yttrium gallides **5,** 52
– spectra of iridium, platinum and gold. Investigation of ultrasoft – **6,** 73

Young's modulus of alloyed iron–nickel invars **5,** 194
Yttrium gallides, X-ray spectranalysis of the electronic structure of – **5,** 52

Zinc content, influence of magnesium additions on the phase sequence during ageing of AlZn alloys with a high – **1,** 116
Zirconium, temperature stability of the ω phase of – **5,** 157
